

PROFESSIONAL SUMMARY

Full Stack Software Engineer with experience building scalable enterprise applications using ASP.NET Core, Node.js, Fastify, React.js, PostgreSQL, Cosmos DB, Kafka, and Elasticsearch. Currently working on CRM platforms for UK gas and electricity suppliers with exposure to multi-tenant architectures, RESTful APIs, event-driven systems, and enterprise workflow automation. Experienced in developing scalable backend services, optimizing system performance, and integrating AI-powered features for workflow intelligence and operational insights. Strong interest in scalable systems, AI-powered applications, modern web technologies, and software architecture.

Education

- **CDAC certified in Post Graduation Diploma in Advanced Computing** 2024-25
Institute for Advanced Computing and Software Development (IACSD), Pune Percentage: 67.3%
- **Bachelor of Technology in Computer Science and Engineering** 2020-24
University of Petroleum and Energy Studies (UPES), Dehradun CGPA: 7.45

Experience

Centralogic India Private Limited April 2025-Present
Software Developer Engineer, Pune

Project 1 — Energy CRM Platform for UK Gas Supplier

Tech Stack: ASP.NET Core, Angular, Azure Cosmos DB, Elasticsearch

- Developed scalable backend APIs and business workflows for a UK-based gas supplier CRM platform serving enterprise-scale utility operations
- Built and optimized RESTful services using ASP.NET Core, improving backend response efficiency and workflow processing by ~25%
- Integrated Azure Cosmos DB for scalable NoSQL data handling and Elasticsearch for high-performance search across large customer and operational datasets
- Collaborated with frontend and product teams to streamline workflows and improve overall system usability and operational efficiency

Project 2 — Multi-Tenant CRM Platform for UK Utilities Services

Tech Stack: Node.js, React.js, Fastify, Prisma ORM, PostgreSQL, Kafka

- Contributed to the development of a multi-tenant CRM platform designed for UK Utilities suppliers
- Built scalable backend services and APIs using Node.js and Fastify, supporting modular and maintainable system architecture
- Worked with Kafka-based event-driven architecture for asynchronous communication and workflow processing across distributed services
- Assisted in implementing intelligent workflow monitoring and AI-driven processing enhancements for operational automation and better issue tracking

• **Celebal Technologies** May-July 2023
Data Science Intern Online
– During my tenure as a Data Science Summer Intern at Celebal Technologies, I have gained hands-on experience in fundamental algorithms. In future utilizing my skills in upcoming projects involving object detection, deep learning.

• **Umbeo Technologies** May - July 2022
Full Stack Web Developer Intern Dehradun
– During my internship, I created websites for clients using WordPress and PHP. One notable project I worked on involved utilizing React.js to develop a feature that displays the user's location on a map and allows them to modify it based on their preferences.

PERSONAL PROJECTS

• **AgriMart** | Spring Boot, React.js, SQL | [Link](#)

Developed a web-based platform that allows users to purchase fresh produce directly from farmers. The system enables seamless product selection, cart management, secure checkout, and order confirmation via email. Implemented using React, Spring Boot, Hibernate, and MySQL, with Axios for API calls and Spring Data JPA for database interactions...

• **AI Resume Analyzer** | Machine Learning, flask | [Link](#)

Our project aims to create a system that matches an individual's skills, either mentioned in their resume or manually inputted, with the most suitable job opportunities through a Flask-based web application. This matching process utilizes cosine similarity and the K-nearest neighbors (KNN) algorithm.

-PDF RAG System | Node.js, Express, LangChain, React | [Link](#)

Developed an end-to-end Retrieval-Augmented Generation (RAG) system to enable context-aware querying of PDF documents. Implemented local embedding generation using Ollama and stored vector representations in Qdrant for efficient similarity search. Designed an asynchronous processing pipeline using BullMQ and Redis to handle scalable document ingestion and processing. Built RESTful APIs for document upload and query handling, and integrated a React-based interface to allow users to interact with documents. The system operates fully offline, providing AI-powered responses without relying on external LLM APIs.

-AI Ticket Assistant | Node.js, Express, MongoDB, Inngest | [Link](#)

Built an AI-powered ticket management system to automate ticket triage, prioritization, and assignment. Integrated Google Gemini API to analyze tickets and generate summaries, priority levels, and contextual insights for faster resolution. Designed an event-driven architecture using Inngest to handle background workflows such as ticket processing and notifications. Implemented secure authentication and role-based access control using JWT, and utilized MongoDB for efficient data storage. The system enhances operational efficiency by automating manual processes and improving response time through intelligent insights.

TECHNICAL SKILLS and Interests

Languages: C/C++, C#, SQL, Python, Java, JavaScript, HTML+CSS

Libraries: C++ STL, NumPy, Pandas, Matplotlib, TensorFlow, React.js, TypeScript, Node.js, .NET

Tools: VS Code, Jupyter, Google Colab, Git, GitHub, Postman, Claude, Codex, Antigravity

Databases: MongoDB, MySQL, Azure Cosmos DB, PostgreSQL

Architecture & Tools: Kafka, Prisma ORM, REST APIs, Elasticsearch, Redis, BullMQ, Git

AI / GenAI: LangChain, RAG, Ollama, Vector Databases, Machine Learning

Areas of Interest: Full Stack Development, Machine Learning, Data Science, GenAI, Cloud Computing.

Soft Skills: Problem Solving, Self-learning, Presentation, Adaptability

Operating Systems: Windows, Linux

Achievements and Extracurricular

- Officially completed Hacktoberfest Challenge 2020 & 2022 successfully
- Completed 30 days of Google Cloud Challenge
- I have published my first article on GeeksforGeeks titled Image Classification Using Support Vector Machine
- Achieved 2nd rank in the university on the GeeksforGeeks coding platform

Certificates

- Oracle Cloud Infrastructure Generative AI Certified Professional
- Deep Learning Fundamentals by Cognitive Class.ai IBM
- Postman API Fundamentals Student Expert Certification
- Introduction to Generative AI by Google Cloud
- Claude Code in Action by Anthropic
